

Physician Information:

Jack Smith, M.D.

Sunshine Dermatology Center

Anytown, NC 22222

Phone: 999-999-9999

PATHOLOGY REPORT

Patient:	Jones, Tommy L.	Case Number:	D15-00006
DOB/Age:	1/10/1938 (77 years)	Date Collected:	01/12/2015
MRN:	12456	Date Received:	01/12/2015
Phone #:	919-563-1485	Date Reported:	01/14/2015

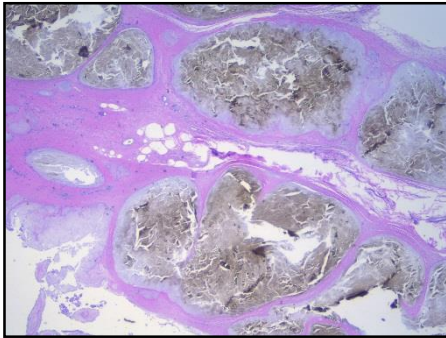

CLINICAL HISTORY:

rule out tophus

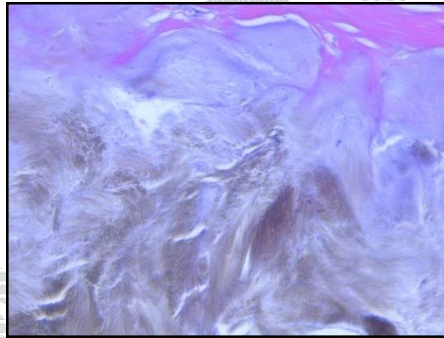

DIAGNOSIS:

Mass, Left Toe (Punch):
TOPHACEOUS GOUT

Images are for illustrative purposes only and should not be used as diagnostic tools

Multiple nodular deposits are seen within dense fibrous connective.

The deposits are composed of brown needle-shaped crystals and amorphous pink material.

Urate crystals are seen under polarized light.

MICROSCOPIC DESCRIPTION:

The sections show large nodular aggregates of acellular material containing brown needle-shaped crystals and amorphous pink material, surrounded by dense fibrosis and rare foreign body-type giant cells. The sections show large nodular aggregates of acellular material containing brown needle-shaped crystals and amorphous pink material, surrounded by dense fibrosis and rare foreign body-type giant cells. The crystals exhibit negative birefringence under polarized light.

GROSS DESCRIPTION:

Received in formalin and labeled with the patient's name and "Left Toe" is a punch biopsy of skin measuring 0.6 x 0.6 x 1.0 cm. The specimen is bisected and entirely submitted in 1 cassette labeled A. Due to the loss of elastic tension and to formalin shrinkage, the measurements in the laboratory description may be less than those taken at the time of surgical removal. gm/GJS
